or more powder coatings are applied for coating.

Sub E4

122

26. (Twice Amended) A powder coating composition which comprises two or more color powder coatings wherein the color of each powder coating is different, a difference in triboelectric charge of said two or more powder coatings is 5.0 $\mu\text{C/g}$ or less; wherein particles of each powder coating are not agglomerated, and wherein said two or more powder coatings form a single layered coating film having a homogeneous hue when said two or more powder coatings are applied for coating.
